

Prove the failure. Claim the sponsor rebate.

A fixed sponsor rebate for a preauthorized reverted transaction.

01

Failed on Sepolia

02

Verified by Attestcoin

03

Rebated on Creditcoin

CURRENT EVIDENCE

Source deployed. Full native proof and target rebate are pending.

Give a sponsorship budget a clear rule.

FOR THE USER

Show an eligible failure. Claim a known amount.

Inspect the receipt and the policy instead of asking an operator to interpret the outcome.

FOR THE SPONSOR

Authorize exact intent. Bound the payout.

Set one-use tickets and fund a limited campaign. No blanket promise for every failed transaction.

PRODUCT HYPOTHESIS

Sponsored recovery may improve onboarding for participating protocols. Demand and retention impact still need validation.

Fixed subsidy. No insurance, full gas reimbursement or fault judgment.

Attestcoin is in the payment path.

- 01 Authorize** Sponsor issues an exact ticket before the action.
- 02 Fail** Sepolia records a genuine failed receipt.
- 03 Prove** Relayer supplies payload + inclusion/continuity proof.
- 04 Verify** Native 0xFD2 checks payload and source height.
- 05 Pay once** Vault checks status 0, ticket policy and replay.

REMOVE THE PROTOCOL

Remove the independent remote-failure check that authorizes payment.

A claim should survive hostile inputs.

Tampered evidence	Native verifier rejects changed proof-bound bytes.
Success / wrong intent	Receipt status and exact ticket checks reject it.
Replayed source transaction	Chain + verified sender + nonce cannot pay twice.
Redirected payout	The ticket fixes beneficiary and rebate.
Payment failure / reentry	Atomic rollback and a claim guard protect state.

42 local policy/security cases

Disclosed verifier harness. Independent source review: no actionable P0-P2 at eb31caa. Neither is a professional audit or native-integration certificate.

Proof is a deliverable.

PENDING AT THIS SNAPSHOT

Target vault and prospective ticket. Eligible source failure. Native proof and tamper rejection. Mined rebate and duplicate rejection.

Public app: gasback-ctc-2026.stetang.chatgpt.site

Public source: github.com/stetang98/gasback-attestcoin

Public review PDF in repository; final prospective-run refresh pending. Video pending.

Historical proof is not a rebate. No accepted entry claimed.

A small pilot. A measurable next step.

First intended users: protocols testing bounded onboarding or retry sponsorship.

PILOT PROPOSAL

One protocol. One action. A fixed budget and a clear eligibility rule.

PROPOSED MEASURES

Proof latency, claim completion, rejection causes, sponsor spend and retry behavior.

NEXT GATE

Complete the real proof-to-payment run and publish reproducible evidence. Validate sponsor demand before expanding scope.

No claimed traction, partners, revenue or accepted submission.
